Acronis True Image 2016 19.0 Build 6559 Multilingual + Bootable ISO [SadeemPC]. .Anaplasma phagocytophilum seroprevalence and risk factors for infection in wild raccoons (Procyon lotor) and possums (Trichosurus vulpecula) in the Sydney region, Australia. To determine the prevalence of Anaplasma phagocytophilum in Australia and to identify risk factors associated with the infection in wild raccoons and possums. Healthy wild raccoons (n=554) and possums (n=539) were captured from natural habitats in the Sydney region of New South Wales (NSW) from 2010 to 2012. Blood samples were collected from the animals and tested by PCR for A phagocytophilum. Sera from all animals were tested by immunofluorescence antibody assay. The overall prevalence of A phagocytophilum in raccoons was 17.3% (95% confidence interval (CI)=14.8-19.9%) and 4.6% in possums (95% CI=2.9-6.3%). In raccoons, A phagocytophilum infection was significantly more common in males (20.3%; 95% CI=16.9-23.7%) than in females (12.4%; 95% CI=9.4-15.3%; P=0.01). The odds of being positive for A phagocytophilum were significantly increased by interaction between age and sex (P=0.006); individuals in their first year of life were more likely to be infected than older animals. In possums, males had higher prevalence (8.1%; 95% CI=4.7-11.6%) than females (4.6%; 95% CI=2.0-7.3%; P
